

Benelli TNT 25: Style Up. Ride Design. Live TNT.

Benelli TNT 25 breaks the mold, offering sleek sportbike styling and stimulating performance in addition to amazing value.

It all starts with the chassis and body, which looks more like a top-of-the-line, full-sized Benelli Tornado model than a budget-oriented alternative.

Like our larger machines, the **TNT 25** features a steel-tube lattice frame, which offers rigidity for superb handling and light weight for maneuverability and confidence-inspiring handling. Advanced suspension – a single-shock system in back and a sturdy inverted fork up front – keeps the ride smooth, while lovely cast alloy wheels and disc brakes front and rear allow for easy and secure stops.

The **TNT 25** is powered by a lightweight and spirited liquid-cooled four-stroke single displacing 249cc and utilizing 4-valve technology and dual overhead camshafts for maximum power. Advanced fuel injection keeps throttle response optimal, while electric starting means it's easy to get going. A 6-speed gearbox gives riders a ratio for every situation, fast or slow, and with 25 horsepower on tap, rider will use them all.

High-end detailing is everywhere on the **TNT 25**. LED blinkers and taillight look cool and make you visible to traffic, while the race-inspired headlight assembly is the same as the TNT 300's – bright and attractive. Instrumentation is comprehensive,

too, so you'll always know what is happening.

The TNT 25 is comfortable, too, with a sculpted seat and a roomy yet sporty riding position. Smartly designed mirrors keep you aware of what's behind you, and grab handles for the passenger keep them secure and smiling.

All in all, the TNT 25 offers a lot of big-bike looks and performance. And that's *definitely* exciting!
